1. Introduction

The CAPB18-002 is an integrated environmental sensor unit with an ultra-small size. The unit combines digital high accuracy pressure sensor and high SNR analog microphone.

The pressure module highlights a capacitive sensing element, 24-bit results and FIFO output, which bring in high accuracy, ultra high precision during temperature changes and very low power consumption. Its I2C interface allows for easy system integration with microcontroller.

The microphone module features high sensitivity and high SNR with low power consumption. The analog output can trace change of environment sound signal timely.

Key features

- Package dimensions: 7-pin LGA, 3.5 mm x 2.65 mm x 1.0 mm
- Pb-free, halogen-free and RoHS compliant

Pressure sensor

- Operation range: Pressure: 300 ~ 1100 hPa. Temperature: -40 ~ +85 °C
- Supply voltage: P-VDD: 1.7 ~3.6 V
- Pressure sensor precision: $\pm 0.003\text{hPa}$ (or $\pm 0.025\text{ m}$) for high precision mode
- Pressure sensor accuracy: $\pm 0.03\text{hPa}$ (or $\pm 0.25\text{ m}$) (relative), $\pm 0.5\text{hPa}$ (or $\pm 0.6\text{ m}$) (absolute)
- Temperature accuracy: $\pm 1.0^\circ\text{C}$
- Pressure temperature sensitivity: typ. 0.5Pa/K
- Measurement time: 3.1ms for low precision mode
- Average current consumption: 3 μA 1 sample / sec. in low power mode
- I2C interface (up to 3.4 MHz), Embedded 24-bit ADC
- FIFO: Stores latest 32 pressure or temperature measurements

Microphone

- Supply voltage: 1.6 ~3.6V (M-VDD)
- Low power: Current consumptions 120uA
- High sensitivity: $-38\pm 1\text{dB}$
- High SNR : 65dB
- Analog Signal Interface

Typical applications

- Enhancement of GPS navigation (dead-reckoning, slope detection, etc.)
- In-door and out-door navigation
- Leisure and sports
- Weather forecast
- Vertical velocity indication (rise/sink speed)
- Analog Audio Signal

Specific notes

Particles can influence the performance of the pressure sensor, we strongly recommend you to introduce special measures to avoid deposition of particles on the MEMS membrane or screen particles after assembly as the assembly process is considered to be the main root cause for particle generation.

2. Test Condition

Table 1: Pressure Sensor Test Condition

| Standard Conditions | Condition | Humidity | Max |
|------------------------|-------------|-------------|----------------|
| Environment conditions | -40°C~+85°C | 25%RH~75%RH | 300hPa~1100hPa |
| Basic test conditions | +25°C | 60%RH~70%RH | 300hPa~1100hPa |

Table 2: Microphone Test Condition

| Standard Conditions | Condition | Humidity | Max |
|------------------------|-------------|-------------|----------------|
| Environment conditions | +15°C~+35°C | 25%RH~75%RH | 860hPa~1060hPa |
| Basic test conditions | +20±2°C | 60%RH~70%RH | 860hPa~1060hPa |

3. Absolute maximum ratings

Table 3: Absolute maximum ratings

| Parameter | Condition | Min | Max | Units |
|---------------------|-------------|------|-------|-------|
| Storage temperature | | -40 | +85 | °C |
| Supply Voltage | All pins | -0.3 | +3.6 | V |
| ESD rating | JESD22-A114 | -2 | +2 | kV |
| Overpressure | | | 10000 | hPa |

4. Electrical characteristics

4.1 Pressure Sensor Characteristics

P-VDD = 1.8V, P-VDDIO=1.8V, T=25°C, unless otherwise noted. If not stated otherwise, the given values are ±3-Sigma values over temperature/voltage range in the given operation mode.

Table 4: Operating conditions, output signal and mechanical characteristics

| Parameter | Symbol | Condition | Min | Type | Max | Units |
|-----------------------|--------|---------------|-----|------|-----|-------|
| Operating temperature | TA | Operational | -40 | 25 | 85 | °C |
| | | Full accuracy | 0 | 25 | 65 | °C |

| | | | | | | | |
|---|-------------------------|---|----------------|-------|------|-------|----|
| Operating Pressure | P | | 300 | | 1100 | hPa | |
| Supply voltage | VDD | | 1.7 | | 3.6 | V | |
| Supply current (with 1 measurement per second.) | I _{dd} | 1 Hz | Low Power | | 3 | 5 | μA |
| | | | Standard | | 11 | 15 | |
| | | | High precision | | 40 | 50 | |
| <i>Note: The current consumption depends on both pressure measurement precision and rate. Please refer to the Pressure Configuration (PRS_CFG) register description for an overview of the current consumption in different combinations of measurement precision and rate.</i> | | | | | | | |
| Peak current | I _{peak} | During conversion | | 400 | 500 | μA | |
| Standby current | I _{dds} | | | | 1 | μA | |
| Relative accuracy pressure | P _R | 950...1050hPa +25...+40°C | | ±3 | | Pa | |
| | | | | ±0.25 | | m | |
| Absolute accuracy pressure | P _A | 300...1100hPa 0...+65°C | | ±0.5 | | hPa | |
| Resolution of output data | | Pressure | | 0.06 | | Pa | |
| | | Temperature | | 0.01 | | °C | |
| Noise in pressure | P _{Noise} | Low Power mode | | | 5 | PaRMS | |
| | | Standard mode | | | 1.2 | | |
| | | High precision mode | | | 0.6 | | |
| <i>Note: Pressure noise is measured as the average standard deviation. Please refer to the Pressure Configuration (PRS_CFG) register description for all precision mode options.</i> | | | | | | | |
| Offset temperature coefficient | TCO | 1000hPa +25...+40°C | | ±0.5 | | Pa/K | |
| | | | | ±4.2 | | cm/K | |
| Absolute accuracy temperature | | 0...+65°C | | ±1 | | °C | |
| Pressure/Temperature measurement rate | f | | 1 | | 128 | Hz | |
| Pressure measurement time | t | Low Power mode | | 5 | 8 | ms | |
| | | Standard mode | | 28 | 35 | | |
| | | High precision mode | | 105 | 115 | | |
| <i>Note: The pressure measurement time (and thus the maximum rate) depends on the pressure measurement precision. Please refer to the Pressure Configuration (PRS_CFG) register description for an overview of the possible combinations of measurement precision and rate.</i> | | | | | | | |
| Supply voltage ramp-up time | t _{vddup} | Time for supply voltage to reach 90% of final value | 0.001 | | 5 | ms | |
| Time to sensor ready | T _{Sensor_rdy} | The SENSOR_RDY bit in the Measurement Configuration register will be set when the sensor is ready | | | 12 | ms | |

| | | | | | | |
|------------------------------------|------------------|--|--|----|-----|-----|
| Time to coefficients are available | TCoef_rdy | The COEF_RDY bit in the Measurement Configuration register will be set when the coefficients can be read out | | | 40 | ms |
| Serial data clock | f _{I2C} | For I2C | | | 3.4 | MHz |
| Long term stability | | 12month | | ±1 | | hPa |

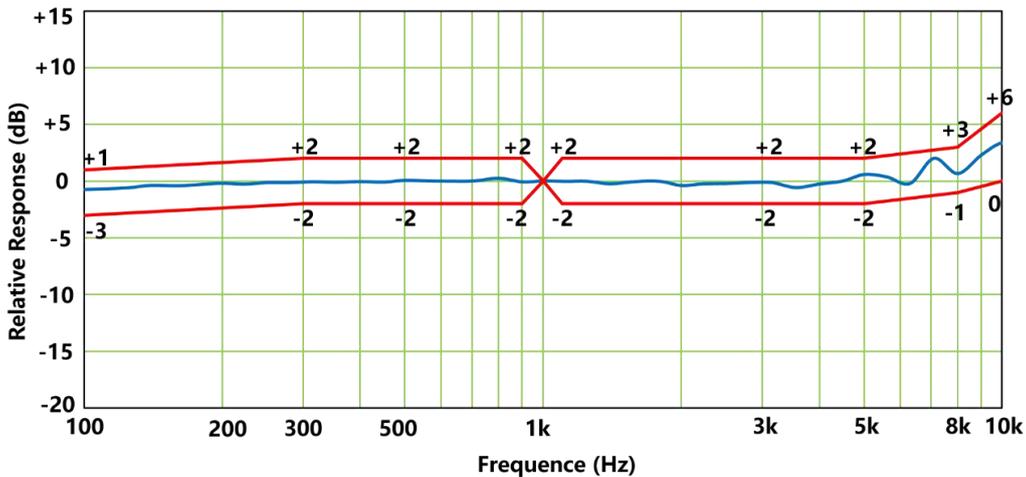

4.2 Microphone Characteristics

M-VDD = 2.0V, unless otherwise noted.

Table 5: Operating conditions, output signal and mechanical characteristics

| Parameter | Symbol | Condition | Min | Type | Max | Units |
|-----------------------------------|--------|--|-----------|------|-----|--------|
| Directivity | | Omni directional | | | | |
| Supply voltage | VDD | | 1.6 | 2.0 | 3.6 | V |
| Output impedance | Zout | f=1kHz, Pin=1Pa | | | 400 | Ω |
| Current consumption | IDD | | | 120 | 150 | μA |
| Sensitivity | S | f=1kHz, pin=1Pa | -39 | -38 | -37 | dB |
| Decreasing voltage characteristic | ΔS | f=1kHz, pin=1Pa Vs=3.6→1.6V | No Change | | | |
| S/N ratio | S/N | f=1kHz, pin=1Pa A-weighted curve | | 65 | | dB |
| Power supply rejection | PSR | 100mVpp square wave@217Hz VDD=2.0V, A-weighted | | -96 | | dBV |
| Total harmonic distortion | THD | 94dB SPL@1kHz | | | 1 | % |
| Acoustic overload point | AOP | 10% THD@1kHz | | 120 | | dB SPL |

Frequency Response Curve and Limits:

4.3 Crosstalk Characteristics

The CAPB18-002 allows the pressure sensor to be used in the same package as a MEMS microphone with little causing interference or crosstalk.

| Parameter | Symbol | Condition | Min | Type | Max | Units |
|-----------|--------|---|-----|------|-----|-------|
| Crosstalk | S/N | Only MIC working | | 65 | | dB |
| | | MIC and pressure sensor working at the same time; pressure sensor working mode OSR=2, ODR=8 | | 64.5 | | |
| | | MIC and pressure sensor working at the same time; pressure sensor working mode OSR=2, ODR=16 | | 64 | | |
| | | MIC and pressure sensor working at the same time; pressure sensor working mode OSR=2, ODR=32 | | 62.5 | | |
| | | MIC and pressure sensor working at the same time; pressure sensor working mode OSR=16, ODR=8 | | 64.5 | | |
| | | MIC and pressure sensor working at the same time; pressure sensor working mode OSR=64, ODR=8 | | 64.5 | | |

5. Operation of Pressure Module

5.1 Operating Modes

The CAPB18-002 supports 3 different modes of operation: Standby, Command, and Background mode.

- Standby Mode
 - Default mode after power on or reset. No measurements are performed.
 - All registers and compensation coefficients are accessible.
- Command Mode
 - One temperature or pressure measurement is performed according to the selected precision.
 - The sensor will return to Standby Mode when the measurement is finished, and the measurement result will be available in the data registers.
- Background Mode
 - Pressure and/or temperature measurements are performed continuously according to the selected measurement precision and rate. The temperature measurement is performed immediately after the pressure measurement.
 - The FIFO can be used to store 32 measurement results and minimize the number of times the sensor must be accessed to read out the results.

Note: Operation mode and measurement type are set in the [Sensor Operating Mode and Status \(MEAS_CFG\)](#) register.

5.2 Measurement Precision and Rate

Different applications require different measurement precision and measurement rates. Some applications, like weather stations, require lower precision and measurement rates than for instance indoor navigation and sports applications.

The CAPB18-002's measurement precision and rate (in background mode) can be configured to match the requirements of the application in which it is being used. This reduces current consumption of the sensor and the system.

In order to achieve a higher precision, the CAPB18-002 will read the sensor multiple times (oversampling), and combine the readings into one result. This increases the current consumption and the measurement time, which again reduces the maximum measurement rate.

The measurement precision, rate and time is set in the [Pressure Configuration \(PRS_CFG\)](#) and [Temperature Configuration \(TMP_CFG\)](#) registers. The register descriptions contain information about the current consumption and the possible combinations of measurement precision, time, and rate.

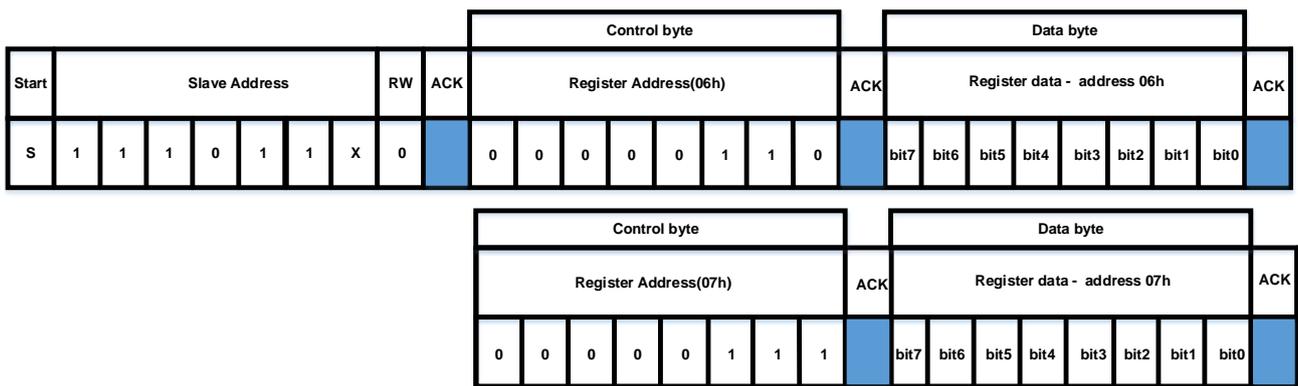

Please note that the pressure sensor is temperature dependent. Temperature measurements must be made together with the pressure measurements in order to compensate for the temperature dependency. This reduces the maximum pressure measurement rate, *since: $\text{Rate}_{\text{temperature}} * \text{Time}_{\text{temperature}} + \text{Rate}_{\text{pressure}} * \text{Time}_{\text{pressure}} < 1 \text{ second}$* . Measurement Settings and Use Case Examples contains a table with examples of combinations of pressure and temperature precision and rates for different use cases.

5.3 Sensor I2C Interface

The CAPB18-002 can be accessed as a slave device through I2C serial interface. And the sensor's address is 0x77 (default).

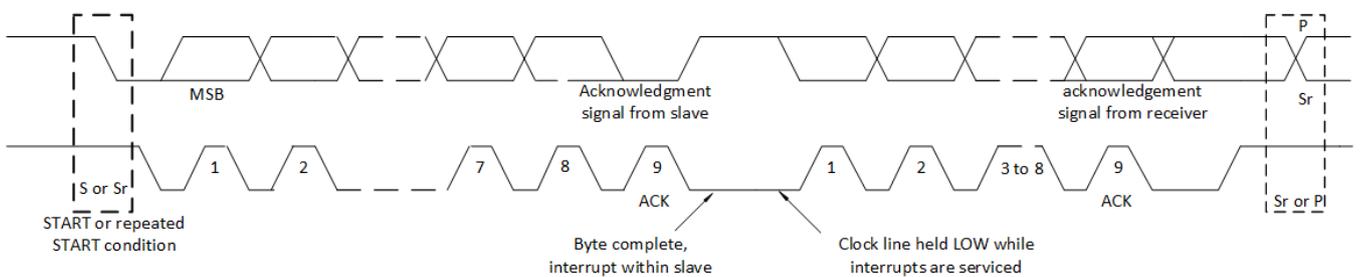

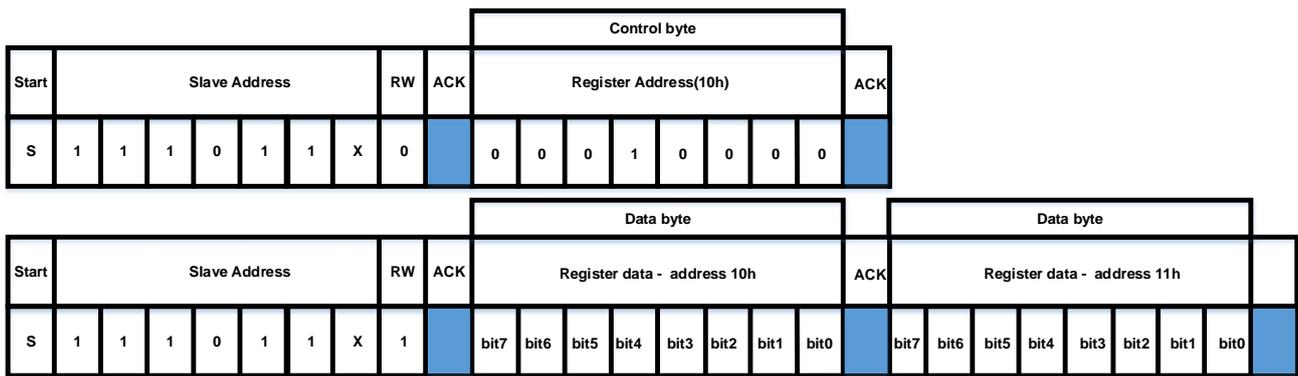

I2C write

Writing is done by sending the slave address in write mode (RW='0'), resulting in slave address 11101110. Then the master sends pairs of register addresses and register data. The transaction is ended by a stop condition.

I2C read

To be able to read registers, first the register address must be sent in write mode (slave address 11101110). Then either a stop or a repeated start condition must be generated. After this the slave is addressed in read mode (RW='1') at address 11101111, after which the slave sends out data from auto-incremented register addresses until a NOACKM and stop condition occurs.

Data transfer on the I2C-bus

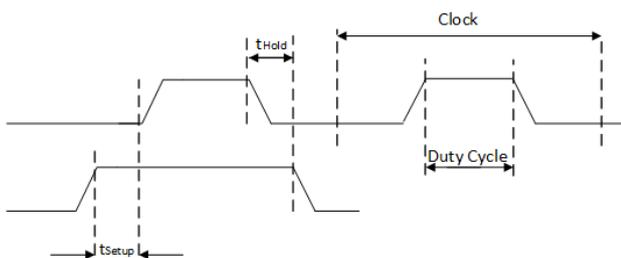

Table 6: I2C timings

| Parameter | Symbol | Values | | | Unit | Note |
|----------------------------|-------------|--------|------|------|------|-------------|
| | | Min. | Typ. | Max. | | |
| Data setup time on SDA pin | T_{Setup} | 20 | | | ns | S&F mode |
| | | 5 | | | ns | HS mode |
| Data hold time on SDA pin | T_{Hold} | 0 | | | ns | S&F&HS mode |
| Duty cycle | DC_{Low} | | | 70 | % | S&F mode |
| | | | | 55 | % | HS mode |

5.4 FIFO Operation

The CAPB18-002 FIFO can store the last 32 measurements of pressure or temperature. This reduces the overall system power consumption when the host processor does not need to continuously pull data from the sensor but can go into standby mode for longer periods of time.

The FIFO will store any combination of temperature and pressure measurements since the measurement rate of temperature and pressure can be set up independently in Background Mode. The pressure rate can for instance be set 4 times higher than the temperature rate and thus only every fifth result will be a temperature result. The measurement type can be seen in the result data. The sensor will set the least significant bit to:

- '1' if the result is a pressure measurement.
 - '0' if it is a temperature measurement.
- The sensor uses 24 bits to store the measurement result. Because this is more bits than is needed to cover the full dynamic range of the pressure sensor, using the least significant bit to label the measurement type will not affect the precision of the result.

The FIFO can be enabled in the Interrupt and [FIFO configuration \(CFG_REG\) register](#). The data from the FIFO is read out from the [Pressure Data \(PRS_Bn\) registers](#) regardless of the next result in the FIFO is a temperature or a pressure measurement.

When a measurement has been read out, the FIFO will auto increment and place the next result in the data register. A flag will be set in the [FIFO Status \(FIFO_STS\) register](#) when the FIFO is empty and all following reads will return 0x800000.

If the FIFO runs full a flag will be set in the [FIFO Status \(FIFO_STS\) register](#) and the sensor will generate an interrupt if this has been enabled in the Interrupt and [FIFO configuration \(CFG_REG\) register](#).

5.5 Calibration and Measurement Compensation

The CAPB18-002 is a calibrated sensor and contains calibration coefficients. These are used in the

application (for instance by the host processor) to compensate the measurement results for sensor non-linearity's.

The sections that follow, describe how to calculate the compensated results and convert them into Pa and °C values.

5.5.1 How to Calculate Compensated Pressure Values

1. Read the calibration coefficients (c00, c10, c20, c30, c40, c01, c11, c21 and c31) from the Calibration Coefficient register.

Note: The coefficients c00 is 20 bit 2's complement numbers, c10 is 19 bit 2's complement numbers, c20, c01 are 16 bit 2's complement numbers, c30 is 15 bit 2's complement numbers, c40, c21 are 12 bit 2's complement numbers, and c11, c31 are 13 bit 2's complement numbers.

2. Choose scaling factors kT (for temperature) and kP (for pressure) based on the chosen precision rate. The scaling factors are listed in Table 7.

3. Read the pressure and temperature result from the registers or FIFO.

Note: The measurements read from the result registers (or FIFO) are 24 bit 2's complement numbers.

Depending on the chosen measurement rates, the temperature may not have been measured since the last pressure measurement.

4. Calculate scaled measurement results.

$$T_{raw_sc} = T_{raw}/kT$$

$$P_{raw_sc} = P_{raw}/kP$$

5. Calculate compensated measurement results.

$$P_{comp}(Pa) = c00 + c10 * P_{raw_sc} + c20 * P_{raw_sc}^2 + c30 * P_{raw_sc}^3 + c40 * P_{raw_sc}^4 + T_{raw_sc} * (c01 + c11 * P_{raw_sc} + c21 * P_{raw_sc}^2 + c31 * P_{raw_sc}^3)$$

5.5.2 How to Calculate Compensated Temperature Values

1. Read the calibration coefficients (c0 and c1) from the Calibration Coefficients (COEF) register.

Note: The coefficients read from the coefficient register are 12 bit 2's complement numbers.

2. Choose scaling factor kT (for temperature) based on the chosen precision rate. The scaling factors are listed in Table 7.

3. Read the temperature result from the temperature register or FIFO.

Note: The temperature measurements read from the temperature result register (or FIFO) are 24 bit 2's complement numbers.

4. Calculate scaled measurement results.

$$T_{raw_sc} = T_{raw}/kT$$

5. Calculate compensated measurement results

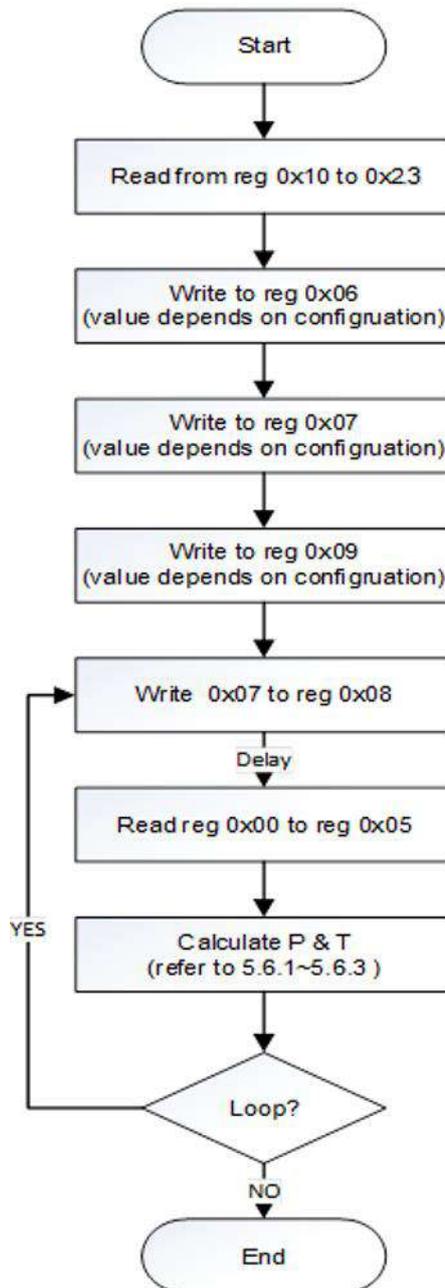

$$T_{comp}(^{\circ}C) = c0*0.5 + c1* T_{raw_sc}$$

5.5.3 Compensation Scale Factors

Table 7: Compensation Scale Factors

| Oversampling Rate | Scale Factor (kP or kT) |
|---------------------------|-------------------------|
| 1 (single) | 524288 |
| 2 times (Low Power) | 1572864 |
| 4 times | 3670016 |
| 8 times | 7864320 |
| 16 times (Standard) | 253952 |
| 32 times | 516096 |
| 64 times (High Precision) | 1040384 |
| 128 times | 2088960 |

5.5.4 Pressure and Temperature calculation flow

5.6 Applications

5.6.1 Measurement Settings and Use Case Examples

Table 8: Measurement Settings and Use Case Examples (TBD)

| Use Case | Performance | Pressure Register Configuration Address: 0x06 | Temperature Register Configuration Address: 0x07 | Other |
|--|--|--|---|---|
| Weather Station (Low power, Background mode) | 5 Pa precision. 1 pr sec. 6 μA | 0x01 | 0x00 | Start background measurements (addr 0x08) |
| Indoor navigation (Standard precision, Background mode) | 10 cm precision. 2 pr sec. 30 μA | 0x14 | 0x00 | Enable P shift (addr 0x09) Start background measurements (addr 0x08) |
| Sports (High precision, high rate, background mode) | 5 cm precision 4 pr sec. 200 μA | 0x26 | 0x20 | Enable P shift (addr 0x09) Start background measurements (addr 0x08) |

5.6.2 Calculating absolute altitude and calculating pressure at sea level

With the measured pressure P and the pressure at sea level P0=1013.25hPa, the altitude in meters can be calculated with the international barometric formula:

$$\text{Altitude} = 44330 \times \left[1 - \left(\frac{P}{P_0} \right)^{\frac{1}{5.255}} \right]$$

Thus, a pressure change of Δp = 1hPa corresponds to 8.43m at sea level.

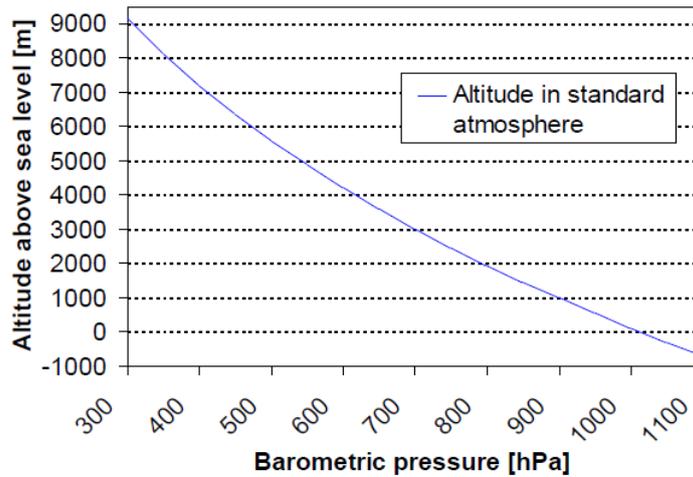

Figure 1: Transfer function: Altitude over sea level – Barometric pressure

With the measured pressure p and the absolute altitude the pressure at sea level can be calculated:

$$P_0 = \frac{p}{\left(1 - \frac{\text{altitude}}{44330}\right)^{5.255}}$$

Thus, a difference in altitude of $\Delta\text{altitude} = 10\text{m}$ corresponds to 1.2hPa pressure change at sea level.

5.7 Register Map

Table 9: Register Map

| Register Name | Addr. | bit7 | bit6 | bit5 | bit4 | bit3 | bit2 | bit1 | bit0 | Reset State |

5.8 Register Description

5.8.1 Pressure Data (PRS_Bn)

The Pressure Data registers contains the 24 bit (3 bytes) 2's complement pressure measurement value. If the FIFO is enabled, the register will contain the FIFO pressure and/or temperature results (please see [FIFO Operation](#)). Otherwise, the register contains the pressure measurement results and will not be cleared after read.

5.8.1.1 PRS_B2

The highest byte of the three bytes measured pressure value.

| | | | | | | | | |
|---------------------|--------------|-------|-------|-------|-------|-------|-------|-------|
| PRS_B2 | Address | | | | | | | 00H |
| Pressure (MSB data) | Reset value: | | | | | | | 00H |
| | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| | PRS23 | PRS22 | PRS21 | PRS20 | PRS19 | PRS18 | PRS17 | PRS16 |

r

| Field | Bits | Type | Description |
|------------|------|------|---|
| PRS[23:16] | 7:0 | r | MSB of 24 bit 2's complement pressure data. |

5.8.1.2 PRS_B1

The middle byte of the three bytes measured pressure value.

| | | | | | | | |
|---------------------|--------------|-------|-------|-------|-------|------|------|
| PRS_B1 | Address | 01H | | | | | |
| Pressure (LSB data) | Reset value: | 00H | | | | | |
| 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| PRS15 | PRS14 | PRS13 | PRS12 | PRS11 | PRS10 | PRS9 | PRS8 |
| r | | | | | | | |

| Field | Bits | Type | Description |
|-----------|------|------|---|
| PRS[15:8] | 7:0 | r | LSB of 24 bit 2's complement pressure data. |

5.8.1.3 PRS_B0

The lowest byte of the three bytes measured pressure value.

| | | | | | | | |
|----------------------|--------------|------|------|------|------|------|------|
| PRS_B0 | Address | 02H | | | | | |
| Pressure (XLSB data) | Reset value: | 00H | | | | | |
| 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| PRS7 | PRS6 | PRS5 | PRS4 | PRS3 | PRS2 | PRS1 | PRS0 |
| r | | | | | | | |

| Field | Bits | Type | Description |
|----------|------|------|--|
| PRS[7:0] | 7:0 | r | XLSB of 24 bit 2's complement pressure data. |

5.8.2 Temperature Data (TMP_Tn)

The Temperature Data registers contain the 24 bit (3 bytes) 2's complement temperature measurement value (unless the FIFO is enabled, please see [FIFO Operation](#)) and will not be cleared after the read.

5.8.2.1 TMP_B2

The highest byte of the three bytes measured temperature value.

TMP_B2 Address 03H
 Temperature (MSB data) Reset value: 00H

| 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|------------|-------|-------|--|-------|-------|-------|-------|
| TMP23 | TMP22 | TMP21 | TMP20 | TMP19 | TMP18 | TMP17 | TMP16 |
| r | | | | | | | |
| Field | Bits | Type | Description | | | | |
| TMP[23:16] | 7:0 | r | MSB of 24 bit 2's complement temperature data. | | | | |

5.8.2.2 TMP_B1

The middle byte of the three bytes measured temperature value.

TMP_B1 Address 04H
 Temperature (LSB data) Reset value: 00H

| 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-----------|-------|-------|--|-------|-------|------|------|
| TMP15 | TMP14 | TMP13 | TMP12 | TMP11 | TMP10 | TMP9 | TMP8 |
| r | | | | | | | |
| Field | Bits | Type | Description | | | | |
| TMP[15:8] | 7:0 | r | LSB of 24 bit 2's complement temperature data. | | | | |

5.8.2.3 TMP_B0

The lowest part of the three bytes measured temperature value.

TMP_B0 Address 05H
 Temperature (XLSB data) Reset value: 00H

| 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|----------|------|------|---|------|------|------|------|
| TMP7 | TMP6 | TMP5 | TMP4 | TMP3 | TMP2 | TMP1 | TMP0 |
| r | | | | | | | |
| Field | Bits | Type | Description | | | | |
| TMP[7:0] | 7:0 | r | XLSB of 24 bit 2's complement temperature data. | | | | |

5.8.3 Pressure Configuration (PRS_CFG)

Configuration of pressure measurement rate (PM_RATE) and resolution (PM_PRC).

PRS_CFG Address: 06H
 Pressure measurement configuration Reset value: 00H

| 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|--------------|--------------|------|---|-------------|---|---|---|
| - | PM_RATE[2:0] | | | PM_PRC[3:0] | | | |
| - | rw | | | rw | | | |
| Field | Bits | Type | Description | | | | |
| - | 7 | - | Reserved | | | | |
| PM_RATE[2:0] | 6:4 | rw | Pressure measurement rate: 000 - 1 measurements pr. sec. 001 - 2 measurements pr. sec. 010 - 4 measurements pr. sec. 011 - 8 measurements pr. sec. 100 - 16 measurements pr. sec. 101 - 32 measurements pr. sec. 110 - 64 measurements pr. sec. 111 - 128 measurements pr. sec. <i>Applicable for measurements in Background mode only</i> | | | | |
| PM_PRC[3:0] | 3:0 | rw | Pressure oversampling rate: 0000 - Single. (Low Precision) 0001 - 2 times (Low Power). 0010 - 4 times. 0011 - 8 times. 0100 *) - 16 times (Standard). 0101 *) - 32 times. 0110 *) - 64 times (High Precision). 0111 *) - 128 times. 1xxx – Reserved | | | | |

*) Note: Use in combination with a bit shift. See [Interrupt and FIFO configuration \(CFG_REG\)](#) register

Table 10: Pressure measurement time (ms) and precision (PaRMS)

| Oversampling (PRC[3:0]) | Single (0000) | 2 times (0001) | 4 times (0010) | 8 times (0011) | 16 times (0100) | 32 times (0101) | 64 times (0110) | 128 times (0111) |
|-------------------------|---------------|----------------|----------------|----------------|-----------------|-----------------|-----------------|------------------|
| Measurement time (ms) | 3.6 | 5.2 | 8.4 | 14.8 | 27.6 | 53.2 | 104.4 | 206.8 |
| Precision (PaRMS) | 5 | | 2.5 | | 1.2 | 0.9 | 0.5 | |

Table 11: Estimated current consumption (µA)

| Oversampling (PRC[3:0]) | Single (0000) | 2 times (0001) | 4 times (0010) | 8 times (0011) | 16 times (0100) | 32 times (0101) | 64 times (0110) | 128 times (0111) |
|-------------------------------------|--|----------------|----------------|----------------|-----------------|-----------------|-----------------|------------------|
| Measurements pr sec.(PM_RATE([2:0]) | | | | | | | | |
| 1 (0000) | 2.1 | 2.7 | 3.8 | 6.1 | 11 | 20 | 38 | 75 |
| 2 (0001) | | | | | | | | |
| 4 (0010) | | | | | | | | |
| 8 (0011) | Note: The current consumption can be calculated as the Measurement Rate * Current Consumption of 1 measurement | | | | | | | n.a. |
| 16 (0100) | | | | | | | n.a. | n.a. |
| 32 (0101) | | | | | | n.a. | n.a. | n.a. |
| 64 (0110) | | | | | n.a. | n.a. | n.a. | n.a. |
| 128 (0111) | | | n.a. | n.a. | n.a. | n.a. | n.a. | n.a. |

Note: The table shows the possible combinations of Pressure Measurement Rate and oversampling when no temperature measurements are performed. When temperature measurements are performed the possible combinations are limited to Rate_{temperature} x Measurement Time_{temperature} + Rate_{pressure} x Measurement Time_{pressure} < 1 second.

5.8.4 Temperature Configuration (TMP_CFG)

Configuration of temperature measurement rate (TMP_RATE) and resolution (TMP_PRC).

TMP_CFG Address: 07H
 Temperature measurement configuration Reset value: 00H

| | | | | | | | |
|---------|---------------|---|---|---|--------------|---|---|
| 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| TMP_EXT | TMP_RATE[2:0] | | | - | TMP_PRC[2:0] | | |

| rw | | rw | - | rw |
|---------------|------|------|---|----|
| Field | Bits | Type | Description | |
| TMP_EXT | 7 | rw | Temperature measurement 0 - Internal sensor (in ASIC) 1 - External sensor (in pressure sensor MEMS element) Note: This bit must be set to '0'. | |
| TMP_RATE[2:0] | 6:4 | rw | Temperature measurement rate: 000 - 1 measurement pr. sec. 001 - 2 measurements pr. sec. 010 - 4 measurements pr. sec. 011 - 8 measurements pr. sec. 100 - 16 measurements pr. sec. 101 - 32 measurements pr. sec. 110 - 64 measurements pr. sec. 111 - 128 measurements pr. sec. <i>Applicable for measurements in Background mode only</i> | |
| - | 3 | - | Reserved | |
| TMP_PRC[2:0] | 2:0 | rw | Temperature oversampling (precision): 000 - single. (Default) - Measurement time 3.6 ms. <i>Note: Following are optional, and may not be relevant:</i> 001 - 2 times. 010 - 4 times. 011 - 8 times. 100 - 16 times. 101 - 32 times. 110 - 64 times. 111 - 128 times. | |

5.8.5 Sensor Operating Mode and Status (MEAS_CFG)

Setup measurement mode.

| | | |
|--|--------------|-----|
| MEAS_CFG | Address | 08H |
| Measurement configuration | Reset value: | c0H |
| 7 6 5 4 3 2 1 0 | | |

| COEF_RDY | SENSOR_RDY | TMP_RDY | PRS_RDY | - | MEAS_CTRL |
|------------|------------|---------|--|---|-----------|
| r | r | r | r | - | rw |
| Field | Bits | Type | Description | | |
| COEF_RDY | 7 | r | Coefficients will be read to the Coefficients Registers after start-up: 0 - Coefficients are not available yet. 1 - Coefficients are available. | | |
| SENSOR_RDY | 6 | r | The pressure sensor is running through self-initialization after start-up. 0 - Sensor initialization not complete 1 - Sensor initialization complete It is recommend not to start measurements until the sensor has completed the self-initialization. | | |
| TMP_RDY | 5 | r | Temperature measurement ready 1 - New temperature measurement is ready. Cleared when temperature measurement is read. | | |
| PRS_RDY | 4 | r | Pressure measurement ready 1 - New pressure measurement is ready. Cleared when procurement measurement is read. | | |
| - | 3 | - | Reserved. | | |
| MEAS_CTRL | 2:0 | rw | Set measurement mode and type: Standby Mode 000 - Idle / Stop background measurement Command Mode 001 - Pressure measurement 010 - Temperature measurement 011 - na. 100 - na. Background Mode 101 - Continuous pressure measurement 110 - Continuous temperature measurement 111 - Continuous pressure and temperature measurement | | |

5.8.6 Interrupt and FIFO configuration (CFG_REG)

Configuration of interrupts, measurement data shift, and FIFO enable.

CFG_REG Address 09H
 Configuration register Reset value: 00H

| 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|----------|----------|---------|---|---------|---------|---------|-----------|
| INT_HL | INT_FIFO | INT_TMP | INT_PRS | T_SHIFT | P_SHIFT | FIFO_EN | SPI_MODE- |
| rw | rw | rw | rw | rw | rw | rw | rw |
| Field | Bits | Type | Description | | | | |
| INT_HL | 7 | rw | Interrupt (on SDO pin) active level: 0 - Active low. 1 - Active high. | | | | |
| INT_FIFO | 6 | rw | Generate interrupt when the FIFO is full: 0 - Disable. 1 - Enable. | | | | |
| INT_TMP | 5 | rw | Generate interrupt when a temperature measurement is ready: 0 - Disable. 1 - Enable. | | | | |
| INT_PRS | 4 | rw | Generate interrupt when a pressure measurement is ready: 0 - Disable. 1 - Enable. | | | | |
| T_SHIFT | 3 | rw | Temperature result bit-shift 0 - no shift. 1 - shift result right in data register. Note: Must be set to '1' when the oversampling rate is >8 times. | | | | |
| P_SHIFT | 2 | rw | Pressure result bit-shift 0 - no shift. 1 - shift result right in data register. Note: Must be set to '1' when the oversampling rate is >8 times. | | | | |

| | | | |
|----------|---|----|---|
| FIFO_EN | 1 | rw | Enable the FIFO: 0 - Disable. 1 - Enable. |
| SPI_MODE | 0 | rw | Set SPI mode: 0-4-wire interface. 1-3-wire interface. |

5.8.7 Interrupt Status (INT_STS)

Interrupt status register. The register is cleared on read.

| | | | | | | | | |
|------------------|---------|---|---|---|---|---------------|---------|---------|
| INT_STS | Address | | | | | | 0AH | |
| Interrupt status | Reset | | | | | | 00H | |
| | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| | - | | | | | INT_FIFO_FULL | INT_TMP | INT_PRS |
| | - | | | | | r | r | r |

| Field | Bits | Type | Description |
|---------------|------|------|---|
| - | 7:3 | - | Reserved. |
| INT_FIFO_FULL | 2 | r | Status of FIFO interrupt 0 - Interrupt not active 1 - Interrupt active |
| INT_TMP | 1 | r | Status of temperature measurement interrupt 0 - Interrupt not active 1 - Interrupt active |
| INT_PRS | 0 | r | Status of pressure measurement interrupt 0 - Interrupt not active 1 - Interrupt active |

5.8.8 FIFO Status (FIFO_STS)

FIFO status register

| | | | |
|----------------------|--------------|--|-----|
| FIFO_STS | Address | | 0BH |
| FIFO status register | Reset value: | | 00H |

| | | | | | | | |
|---|---|---|---|---|---|-------|-------|
| 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| - | | | | | | FIFO_ | FIFO_ |
| - | | | | | | FULL | EMPTY |
| - | | | | | | r | r |

| Field | Bits | Type | Description |
|------------|------|------|--|
| - | 7:2 | - | Reserved. |
| FIFO_FULL | 1 | r | 0 - The FIFO is not full 1 - The FIFO is full |
| FIFO_EMPTY | 0 | r | 0 - The FIFO is not empty 1 - The FIFO is empty |

5.8.9 Soft Reset and FIFO flush (RESET)

Flush FIFO or generate soft reset.

RESET Address: 0CH
 FIFO flush and soft reset Reset value: 00H

| | | | | | | | |
|------------|---|---|---|----------|---|---|---|
| 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| FIFO_FLUSH | - | | | SOFT_RST | | | |
| w | - | | | w | | | |

| Field | Bits | Type | Description |
|------------|------|------|---|
| FIFO_FLUSH | 7 | w | FIFO flush 1 - Empty FIFO After reading out all data from the FIFO, write '1' to clear all old data. |
| - | 6:4 | - | Reserved. |
| SOFT_RST | 3:0 | w | Write '1001' to generate a soft reset. A soft reset will run through the same sequences as in power-on reset. |

5.8.10 Product and Revision ID (ID)

Product and Revision ID.

ID Address: 0DH
 Product and revision ID Reset value: 0x10H

| REV_ID | | PROD_ID | |
|---------|------|---------|-------------|
| r | | r | |
| Field | Bits | Type | Description |
| REV_ID | 7:4 | r | Revision ID |
| PROD_ID | 3:0 | r | Product ID |

5.8.11 Calibration Coefficients (COEF)

The Calibration Coefficients register contains the 2’s complement coefficients that are used to calculate the compensated pressure and temperature values.

Table 12: Calibration Coefficients

| Coefficient | Addr. | bit7 | bit6 | bit5 | bit4 | bit3 | bit2 | bit1 | bit0 |
|-------------|-------|-------------|------|------|------|-------------|------|------|----------|
| c0 | 0x10 | c0 [11:4] | | | | | | | |
| c0/c1 | 0x11 | c0 [3:0] | | | | c1 [11:8] | | | |
| c1 | 0x12 | c1 [7:0] | | | | | | | |
| c00 | 0x13 | c00 [19:12] | | | | | | | |
| c00 | 0x14 | c00 [11:4] | | | | | | | |
| c00/c10 | 0x15 | c00 [3:0] | | | | c10 [18:15] | | | |
| c10 | 0x16 | c10 [14:7] | | | | | | | |
| c10/c11 | 0x17 | c10 [6:0] | | | | | | | c11 [12] |
| c11 | 0x18 | c11 [11:4] | | | | | | | |
| c11/c21 | 0x19 | c11 [3:0] | | | | c21 [11:8] | | | |
| c21 | 0x1A | c21 [7:0] | | | | | | | |
| c20 | 0x1B | c20 [15:8] | | | | | | | |
| c20 | 0x1C | c20 [7:0] | | | | | | | |
| c01 | 0x1D | c01 [15:8] | | | | | | | |
| c01 | 0x1E | c01 [7:0] | | | | | | | |

| | | | |
|---------|------|------------|------------|
| c30 | 0x1F | c30 [14:7] | |
| c30/C31 | 0x20 | c30 [6:0] | C31 [12] |
| c31 | 0x21 | c31 [11:4] | |
| c31/c40 | 0x22 | c31 [3:0] | c40 [11:8] |
| c40 | 0x23 | c40 [7:0] | |

6. Application Circuit Example

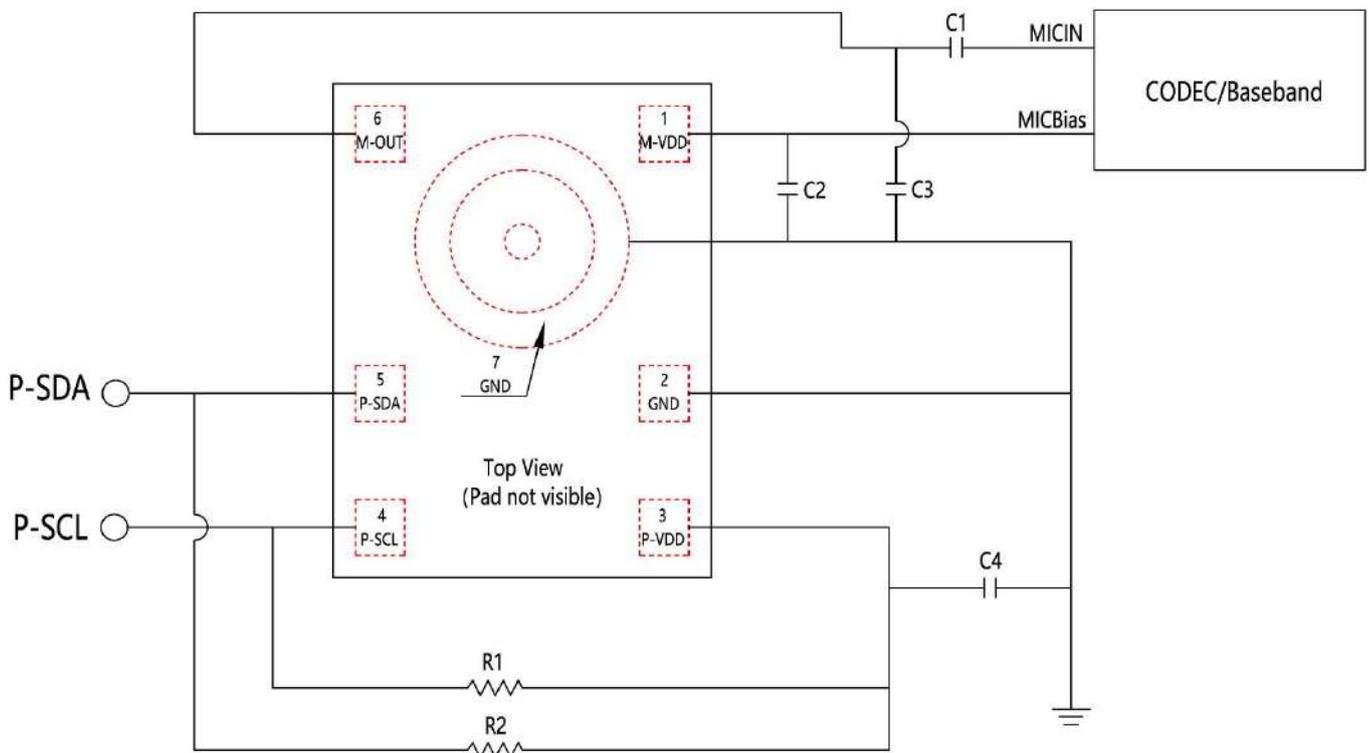

Figure 2: Typical Application Circuit

Table13: Component Values

| Component | Symbol | Values | | | Note / Test Condition |
|---------------------------|--------|--------------------|-------|------|--|
| | | Min. | Typ. | Max. | |
| | C1 | Depending on codec | | | |
| Supply Blocking Capacitor | C2 | | 100nF | | placed as close to the package pins as |
| RF Filter Capacitor | C3 | | 33pF | | |

| | | | | | |
|---------------------------|---------------------------------|-------|--------|--|--|
| Pull-up Resistor | R ₁ , R ₂ | 2.2kΩ | 4.7 kΩ | | R2 is optional |
| Supply Blocking Capacitor | C4 | | 100nF | | The blocking capacitors should be placed as close to the package pins as possible. |

7 Mechanical characteristics

7.1 Pin configuration

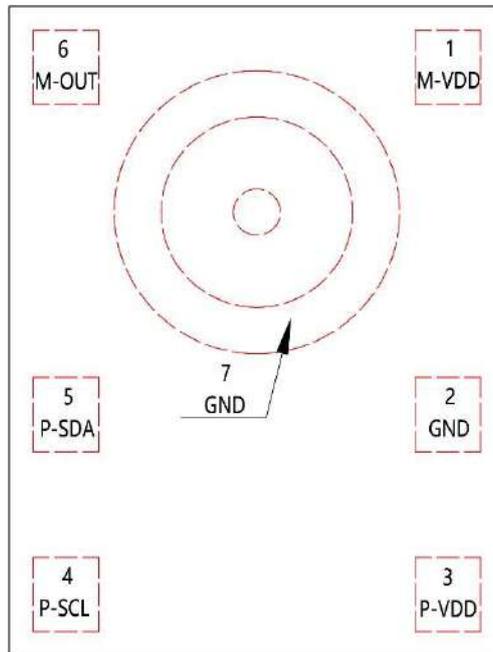

Figure 3: Layout pin configuration CAPB18-002 (Top View, PAD Not Visible)

Table14: Pin configuration of CAPB18-002

| Pin No. | Name | Function |
|---------|-------|-----------------------------|
| 1 | M-VDD | Microphone Power |
| 2 | GND | Ground for MIC and pressure |
| 3 | P-VDD | Pressure Power |
| 4 | P-SCL | Pressure Serial Clock |
| 5 | P-SDA | Pressure Serial data in/out |
| 6 | M-OUT | Microphone Output |
| 7 | GND | Ground for MIC and pressure |

7.2 Outline dimensions

The sensor housing is a 7 Pin LGA package with metal lid. Its dimensions are 3.5mm (± 0.1 mm) x 2.65mm (± 0.1 mm) x 1.0mm (± 0.1 mm), undeclared tolerance (± 0.1 mm)

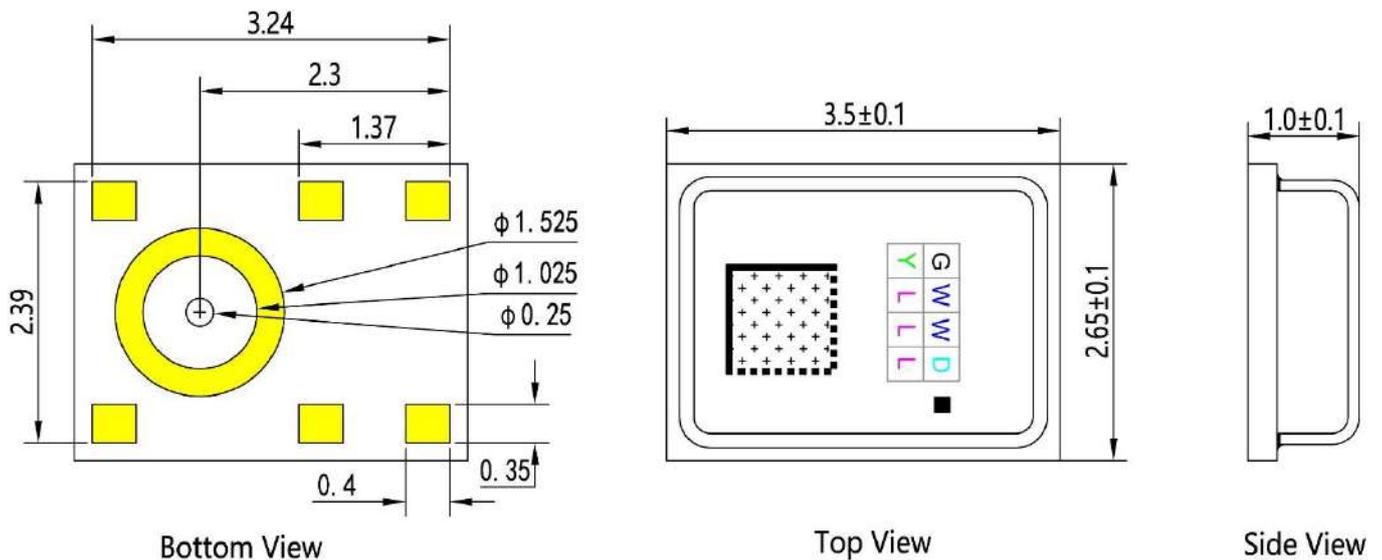

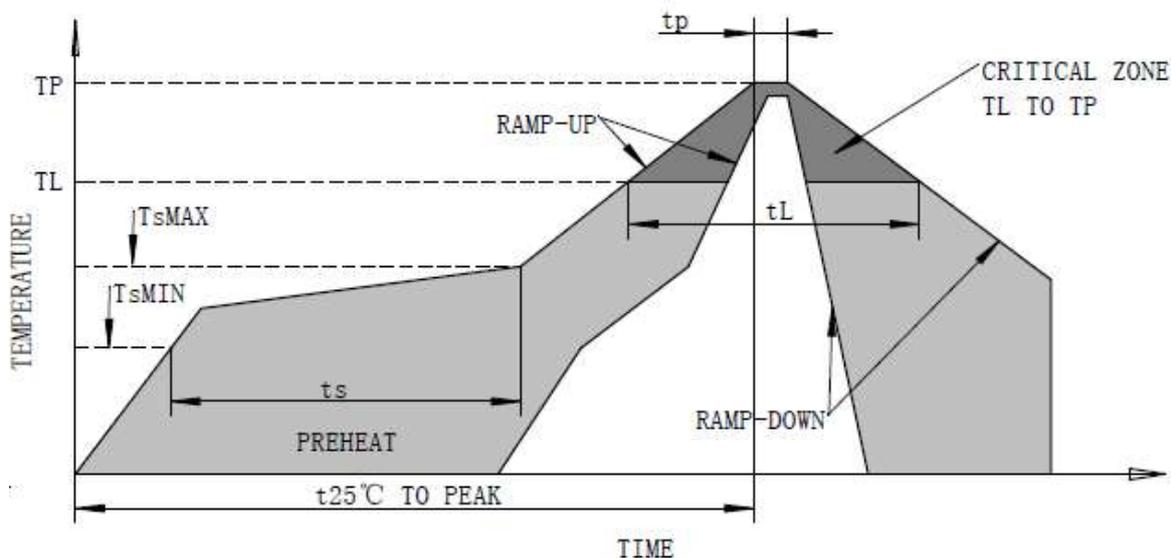

Figure 4: CAPB18-002 outline and size

8 Storage and transportation

- Keep in warehouse with less than 75% humidity and without sudden temperature change, acid air, any other harmful air or strong magnetic field. Recommend storage period no more than 1 year and floor life(out of bag) at factory no more than 4 weeks.
- The MEMS pressure sensor with normal pack can be transported by ordinary conveyances. Please protect products against moist, shock, sunburn and pressure during transportation.
- Storage Temperature Range: $-40^{\circ}\text{C} \sim +85^{\circ}\text{C}$
- Operating Temperature Range: $-40^{\circ}\text{C} \sim +85^{\circ}\text{C}$

9 Soldering recommendation

Recommended Solder Reflow

| Profile Feature | Pb-Free Assembly |
|---|------------------|
| Average ramp-up rate(TsMAX to TP) | 3°C/seconds max. |
| Preheat | |
| -Temperature Min.(TsMIN) | 150°C |
| -Temperature Max.(TsMAX) | 200°C |
| -Time(TsMIN to TsMAX)(Ts) | 60~80seconds |
| Time maintained above: | |
| -Temperature(TL) | 217°C |
| -Time(tL) | 60~150seconds |
| Peak temperature(TP) | 260°C |
| Time within 5°C of actual peak temperature(TP)2 | 20~40seconds |
| Ramp-down rate | 4°C/seconds max |
| Time 25°C to peak temperature | 8 minutes max |

10 Package Specifications

Carrier Tape Information [Unit: mm]
 Quantity per reel: 5kpcs.

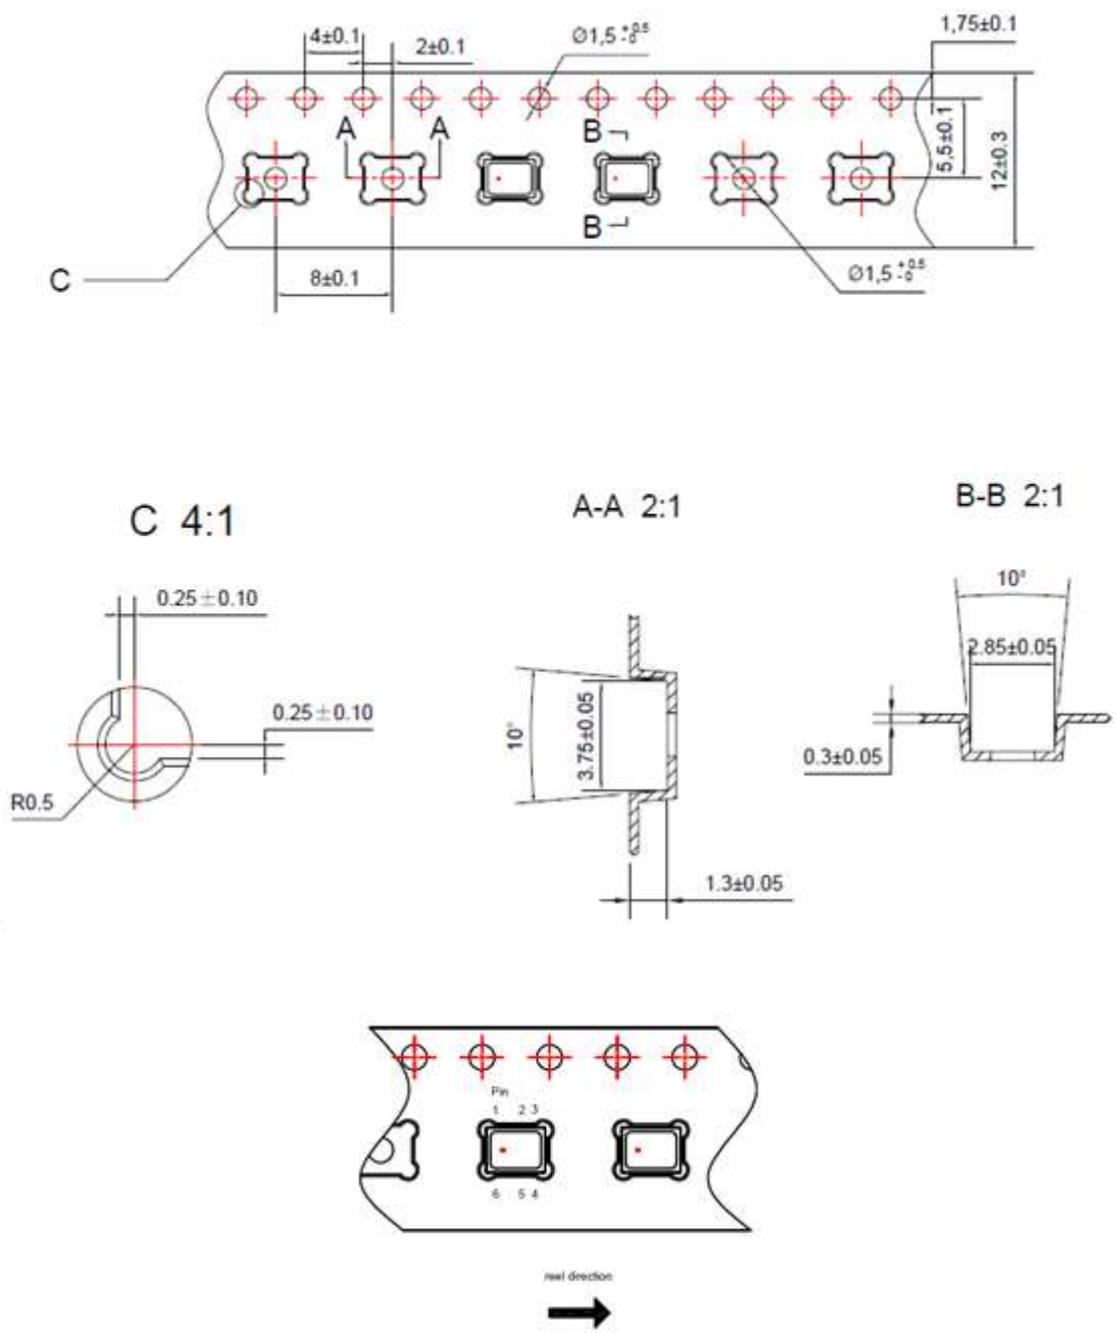

Figure 5: Carrier Tape

11 Cautions When Using Sensor Unit

- **Board Wash Restrictions**
It is very important not be subjected to any liquid or gaseous cleaning methods, otherwise this may damage the sensor.
- **Strong airflow(such as nozzle) Restrictions**
It is very important not to be pull a nozzle over the acoustic port of the microphone module or blow the acoustic port, otherwise this may damage the microphone.
- **Away from dust or particle**
It is very important to protect the sensor from dust or particle, otherwise this may pollute the membrane of microphone module, and lower the performance of sensor.
- **Away from Mechanical stress**
It is very important to set the sensor away from mechanical stress from assembling process or mechanical structure, otherwise this may make the pressure module swift from calibration value.
- **Ultrasonic Restrictions**
It is very important not to use ultrasonic procedures, otherwise this may damage the microphone module.

Please refer to Design Guide of CAPB18-002 for detailed information.

12 Land Pattern and Stencil Design

12.1 Pin configuration

The following figure shows the design recommendations for the client PCB pad.

- The sound hole of the product is designed at the bottom to prevent too much solder paste from remaining around the sound hole, which hinders the acoustic channel.
- PCB sound hole size design needs to meet acoustic requirements to ensure better MIC frequency response. At the same time, it is necessary to ensure that there is a wide enough welding ring pad around the sound hole, so that the welding between microphone and PCB pad is completely sealed to avoid sound leakage.
- PCB sound hole should be non-metallic through-hole to avoid solder paste flowing into the sound hole, resulting in sound hole blockage.

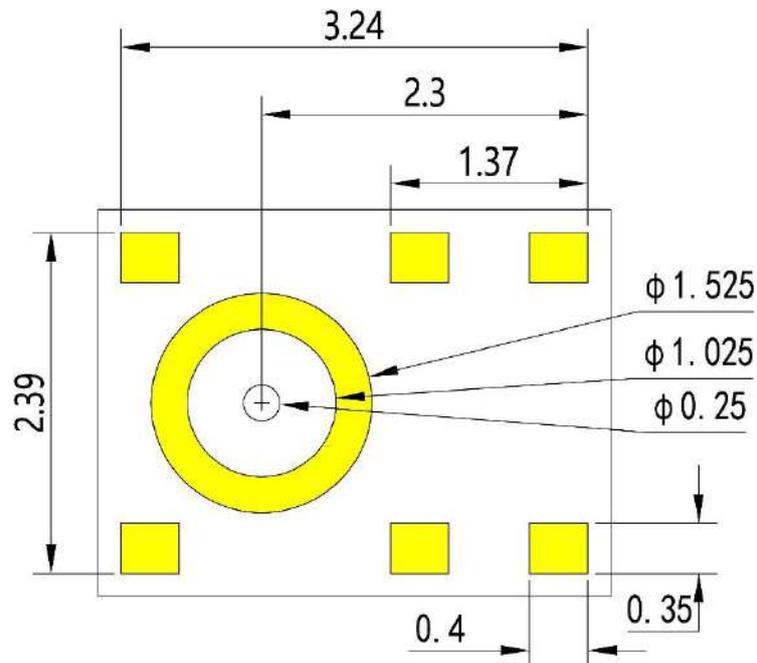

Figure 6: Land Pattern

Note: the yellow area is PCB pad (1:1 window opening)
It is recommended to open the window 1:1 for solder paste screen

12.2 Stencil Design

- When applying solder paste, stainless steel template is recommended;
- The recommended stencil for silk screen printing is 90-150 μ m (3.5-6 mil);
- The stencil opening of signal pad should account for 70-90% of PCB pad area;
- In order to release the solder paste better, the hole wall should be trapezoidal and the corners should be rounded.
- Tight IC lead arrangement requires accurate alignment of stencil and PCB. Before using solder paste, the assembly accuracy of stencil and printed circuit should be within 25 μ m (1 mil).

13 Reliability Specifications

| No. | Test Items | Test condition |
|-----|----------------------------------|--|
| 1 | High Temperature Storage | 125°C,1000h (JESD22-A103) |
| 2 | High Temperature & Humidity Test | 85°C, 85%R.H, 1000h, V=Vcc max (JESD22-A101) |
| 3 | Thermal Shock Test | -40°C/0.5 hours ~125°C/0.5 hours, 500 cycles (JESD22-A106) |
| 4 | Mechanical Shock Test | 3000g,0.3ms,6axes*3 times (JESD22-B110) |
| 5 | Vibration Test | From 20 to 2000Hz peak acceleration 20g,16min/axis(4 cycles),X,Y and Z axis total 48 minutes (JESD22-B103) |
| 6 | ESD-HBM | ±2KV,3 times for each pad (JESD22-A114) |
