Additional Information

Using a different actuating element

You can use a different actuator instead of the BT-F130-A actuator provided, which must be positioned centrally in the sensor opening. When using a different actuating element, the element must fulfill all requirements relating to the material, dimensions and distance to the sensitive surface on the sensors (see table). Failing to fulfill all of these requirements may reduce the accuracy/resolution of the sensor or even cause the sensor to stop functioning.

Dimensions when using a different actuating element

- A Drive shaft
- B Insulation ring made from non-conductive material
- C Separate actuator ($L \geq 23 \text{ mm}$)
- D Sensitive surface on the sensors (black, cylindrical inner surface)
- E Sensor

Actuator (C) can be placed on the insulating ring made from non-conductive material (B) or inserted in this ring.
